

Pie Chart Activity Sheet

"Snail Carnage"

Current Whereabouts of Fred's Snails

Stan is alarmed to find younger brother Fred has been keeping snails indoors again. He's drawn up a pie chart to show where the snails are hiding, but needs your help. Can you answer the following questions so Stan can get them back in the garden before bedtime?

1. There are six snails partying in the salad drawer. How many snails are there altogether?
2. What percentage of the snails have been hiding in Dad's slippers?
3. The snails in the hallway and the snails on the landing have managed to find their way back into the garden. How many snails does that leave for Stan to try and rescue?
4. Stan has just discovered that 50% of the snails under his bed are actually slugs. How many slugs are there?

5. After all that snail rescuing, Stan could do with some cake. Luckily Gran's been baking muffins. Draw in the pie chart sections to show the amount of different cakes she has made. Colour them in to look gooey and tasty. Which muffin would you choose?

Rainbow Sprinkles	8	Chocolate Orange	4
Lemon Drizzle	2	Peanut Butter	2

Tip: To help you construct your pie chart, add up the total amount of cakes, and think about fractions.
